

arthritis +

WITH GLUCOSAMINE

(FORMULATED WITH IONIC SEA MINERALS)

There's a difference between getting older and feeling older

For years, many people thought that experiencing an increase in minor aches and pains in the joints was part of growing older, just part of the aging process. It's true that our bodies begin to break down and deteriorate, but only if we let them.

Fortunately, we at Albi Naturals have developed a formula for those who experience joint stiffness and discomfort. With Arthritis +, we believe you can grow older more comfortably.

Arthritis + is one of the best selling bone and joint nutritional support supplements in the industry. No other bone and joint supplement contains all of the minerals and trace minerals of Arthritis +. Arthritis + provides magnesium, boron, full spectrum minerals and ionic sea minerals, combined with calcium and a whole array of herbs and enzymes, to help increase joint mobility and functionality while decreasing joint discomfort and stiffness. Arthritis + also contains glucosamine sulfate and calcium hydroxyapatite for the most complete bone and joint health supplement available today.

The importance of Ionic Sea Minerals

An ionic mineral is an element that has a charge, either positive or negative. On the molecular level, that means the element has either one too many or too few electrons. This unstable ionic state allows the element to bond readily with water, making it possible for the body to absorb it. In this state, an element has specific positive or negative electrical signatures that cause a dynamic equilibrium to take place. The body can then assimilate minor changes to move nutrients to the areas that need them.

Ionic sea minerals are added to the Arthritis + Formula. Your body requires nearly two thirds of all the elements currently known to man in order to maintain health, keeping these minerals in balance is a complex yet incredibly vital task. The events of everyday demand a continual ingestion of minerals, perhaps that is why an estimated 90% of Americans suffer a mineral deficiency or imbalance.

Unfortunately in today's world, naturally occurring, nutrient-rich foods are becoming a thing of the past. Eons of vegetation growth and aggressive modern farming techniques have brought many of the earth's minerals to the surface where they have been washed away to the oceans.

Chemical and electrical processes are occurring within your body at every moment. Processes that can only function correctly if the proper balance of minerals is continually being supplied to your system. Iron for your blood, sulfur for your muscles, calcium for your bones, and an aggregation of many other elements in balanced trace amounts to ensure the proper function of your body.

In a few surviving inland seas such as the Great Salt Lake of western North America, these essential elements exist in highly concentrated, salubrious proportions. The fact that the minerals are in a similar proportion as healthy, living matter is a key. And this intricate balance of every mineral and trace element in seawater is why it is so beneficial to the human body.

Albi Naturals has now developed a line that uses this highly concentrated seawater from Great Salt Lake – known as Ionic Sea Minerals – and we have added this to the Arthritis + Formula. When you've been

deficient in your mineral intake, and you take Ionic Sea Minerals, you can soon feel the difference supplementing your diet with the essential nutrients can make.

Increased mineral intake also conditions your body for more ready absorption of the other ingredients in our many formulas. Taking a formula with Ionic Sea Minerals ensures you are getting the most from every supplement you take.
