

cal-mag-zinc

(FORMULATED WITH IONIC SEA MINERALS)

Bone & Joint Health at the speed of Liquid

Recent research highlights the important health benefits of maintaining proper bone mass for a lifetime. Proper exercise and supplementation of calcium and vitamin D for those not getting enough in their diet can help promote healthy bones.

Cal-Mag-Zinc is a perfectly balanced daily liquid supplement of calcium, magnesium, zinc and vitamin D synergistically formulated to support bone, muscle and connective tissue health.

This fast-absorbing ionic liquid formula has a great Pina Colada flavour. It also contains ionic sea minerals – a full spectrum of ionic trace mineral complex of over 72 trace minerals and elements that help to aid in the absorption process.

As an additional benefit, calcium, magnesium and zinc play an integral role in the body's energy generation and enzyme production at the cellular level.

The importance of Ionic Sea Minerals

An ionic mineral is an element that has a charge, either positive or negative. On the molecular level, that means the element has either one too many or too few electrons. This unstable ionic state allows the element to bond readily with water, making it possible for the body to absorb it. In this state, an element has specific positive or negative electrical signatures that cause a dynamic equilibrium to take place. The body can then assimilate minor changes to move nutrients to the areas that need them.

Ionic sea minerals are added to the Cal-Mag-Zinc Liquid Formula. Your body requires nearly two thirds of all the

elements currently known to man in order to maintain health, keeping these minerals in balance is a complex yet incredibly vital task. The events of everyday demand a continual ingestion of minerals, perhaps that is why an estimated 90% of Americans suffer a mineral deficiency or imbalance.

Unfortunately in today's world, naturally occurring, nutrient-rich foods are becoming a thing of the past. Eons of vegetation growth and aggressive modern farming techniques have brought many of the earth's minerals to the surface where they have been washed away to the oceans.

Chemical and electrical processes are occurring within your body at every moment. Processes that can only function correctly if the proper balance of minerals is continually being supplied to your system. Iron for your blood, sulfur for your muscles, calcium for your bones, and an aggregation of many other elements in balanced trace amounts to ensure the proper function of your body.

In a few surviving inland seas such as the Great Salt Lake of western North America, these essential elements exist in highly concentrated, salubrious proportions. The fact that the minerals are in a similar proportion as healthy, living matter is a key. And this intricate balance of every mineral and trace element in seawater is why it is so beneficial to the human body.

Albi Naturals has now developed a line that uses this highly concentrated seawater from Great Salt Lake – known as Ionic Sea Minerals – and we have added this to the Cal-Mag-Zinc Liquid Formula. When you've been deficient in your mineral intake, and you take Ionic Sea Minerals,

you can soon feel the difference supplementing your diet with the essential nutrients can make.

Increased mineral intake also conditions your body for more ready absorption of the other ingredients in our many formulas. Taking a formula with Ionic Sea Minerals ensures you are getting the most from every supplement you take.
